

## ALPENCO SAF-T-GUIDER™

Greatly minimize the risk of serious hand injuries with the Alpenco Saf-T-Guider™. The Push/Pull, lightweight tool is used for the hands-free guiding and directing of heavy crane and fork lift loads. Made with an Ash Hard Wood pole with a serrated cast Aluminum head for ease of arm extension during long reaches. The 18" and 24" models can be carried on your tool belt for quick access and weighs under 2 lbs. **Sizes:** 18", 24", 36", 48", 72", 96", and 120"(special order)

Two styles heads (seen below).

Ash Wood Pole with dipped sand grip finish  
"S" Shaped Serrated Aluminum Cast Head for  
Pushing and Pulling

Sold by: Each Box quantity: 6 EA

Part # AL ASG-\_\_-7710 (size)

Diameter: 1 1/8"

Ash Wood Pole with dipped sand grip finish  
Special "C" shaped head for the grabbing and  
guiding / pushing and pulling of cables.

Sold by: Each Box quantity: 6 EA

The Ash wood is very strong but light which allows the user to extend the pole outward. Also the Ash wood will not splinter if it breaks. **Remember these poles are for pushing and pulling in place of your hand and arm, they are not crow bars for prying.** The aluminum head will pull/break off the pole at approximately 300 lbs of pulling/pushing force. If they do snap, it's a soft and non-violent break without splintering.

- \*It is recommended that an employee is completely under control and balanced when guiding.
- \*It is **NOT** recommended for an employee to use their maximum force to push/pull, the pole is intended for guiding **ONLY**.
